Hermetic Carrier

The comfortable carrying system for special demands.

Hermetic Carrier

The ideal partner for all kinds of transport

The Hermetic Carrier opens up unimagined possibilities of baggage transport in everyday life as well as in extreme conditions. The high advanced, but still quite clearly and simply designed main body is made of synthetic material resistant to cuts, scratches and impacts so that contents will stay clean, dry and undamaged at any time. The synthetic material is in accordance with FDEA and therefore suitable for use with foodstuffs, too.

Having a diameter of 28 cm, the Hermetic Carrier's opening can be closed in a water-tight manner through a screw cap and is wide enough to even pack large volume items, e.g. photography equipment, motor saws, break-barrel guns that may be disassembled or different tools.

Fastening recesses with retaining webs all around can be used to attach belts with buckles, ropes or cords, turning the Hermetic Carrier into a connectable carrying system.

All these features make the Hermetic Carrier an indispensable means of transport during expeditions. Whether as a durable roof luggage system for off-road purposes, as an excellent baggage module for boats, as a practical piece for raft-building or as a theft and damage-proof container in the event of long-distance air travels – the Hermetic Carrier is characterised by its versatile capabilities:

- Equipments, such as for sports, photography, fishing, hunting and other hobbies, are ideally protected and carried.
- Package system for off-road vehicles, campervans and boats
- Ideal carrying system for expeditions (or for transporting water and other liquids)

The Hermetic Carrier's expedient features at a glance

- Absolutely water-proof and floatable
- Extremely sturdy as well as cut, scratch and impact-resistant
- Protects contents from dust, sand, dampness and vermin
- Lockable
- Comfortable to carry, also over a longer period of time
- Temperature-resistant from -45°C to +80°C

Assembly instructions

for the Hermetic Carrier system

The comfortable carrying system can be quickly affixed to the Hermetic Carrier through using stainless steel screws. The adjustable and padded straps make sure the Hermetic Carrier can be easily carried like a framed backpack.

Technical specifications

Capacity: 65 litres
Dimensions (height/width/depth): 570mm / 360 mm / 330 mm
Weight: 3500 g
Colour: green
Cap colour: red (as signal colour)
Temperature resistance: -45° to +80° C

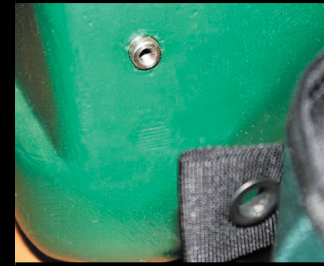

1. Equipment for assembly

Screws, shims and an Allen key, including a reserve screw and shim, are in the small external zip pocket on right side of the hip belt.

2. The correct position

Use the screws to affix the carrying system on the container's thread inserts. (Cf. arrows, fig. left)

3. The correct order

The screwing has to take place in the following order: Place the carrying system directly onto the container. Then put on the shim. Affix the screw by using the Allen key!

4. Care and maintenance

When in use, please apply some petroleum jelly onto the cover thread and gasket from to time. The screws should be checked every now and then and tightened if necessary.

5. Comfortable and safe

The Hermetic Carrier can be used in versatile ways: safe and water-proof storage of baggage and comfortable baggage transport ensured by a quick fastening of the carrying system.
